

Europe's Land Dependency and its Impacts

Europe's Land Footprint

Europe's global land demand

Evaluation of **Europe's land footprint**

Study for Friends of the Earth Europe (May – Sept 2011)

- **How big are the land areas** (in hectares) embodied in European imports and exports?
- How do the **numbers for embodied land** relate to the arable land available within Europe?
- **Which products and product groups** make up the largest shares of land embodied in imports?
- **In which countries** and world regions does Europe appropriate which types of land?
- **How have trends developed** between 1997 and 2004?

Methodology

- **EE-MRIO** Environmentally-extended Multi-Regional Input-Output Analysis
- **Monetary model** (national IO tables linked through international trade) extended by land use data in ha
- MRIO – tracing environmental impacts along the production chain, from final consumption back to extraction
 - whole value chain **across geographical borders and industries**
- **Land footprint: domestic consumption + imports – exports**
 - absolute land areas, no weighting with productivity
→ **NOT ecological footprint**
- Should be interpreted within indicator set (material, water, land and GHG emissions)

Data Source

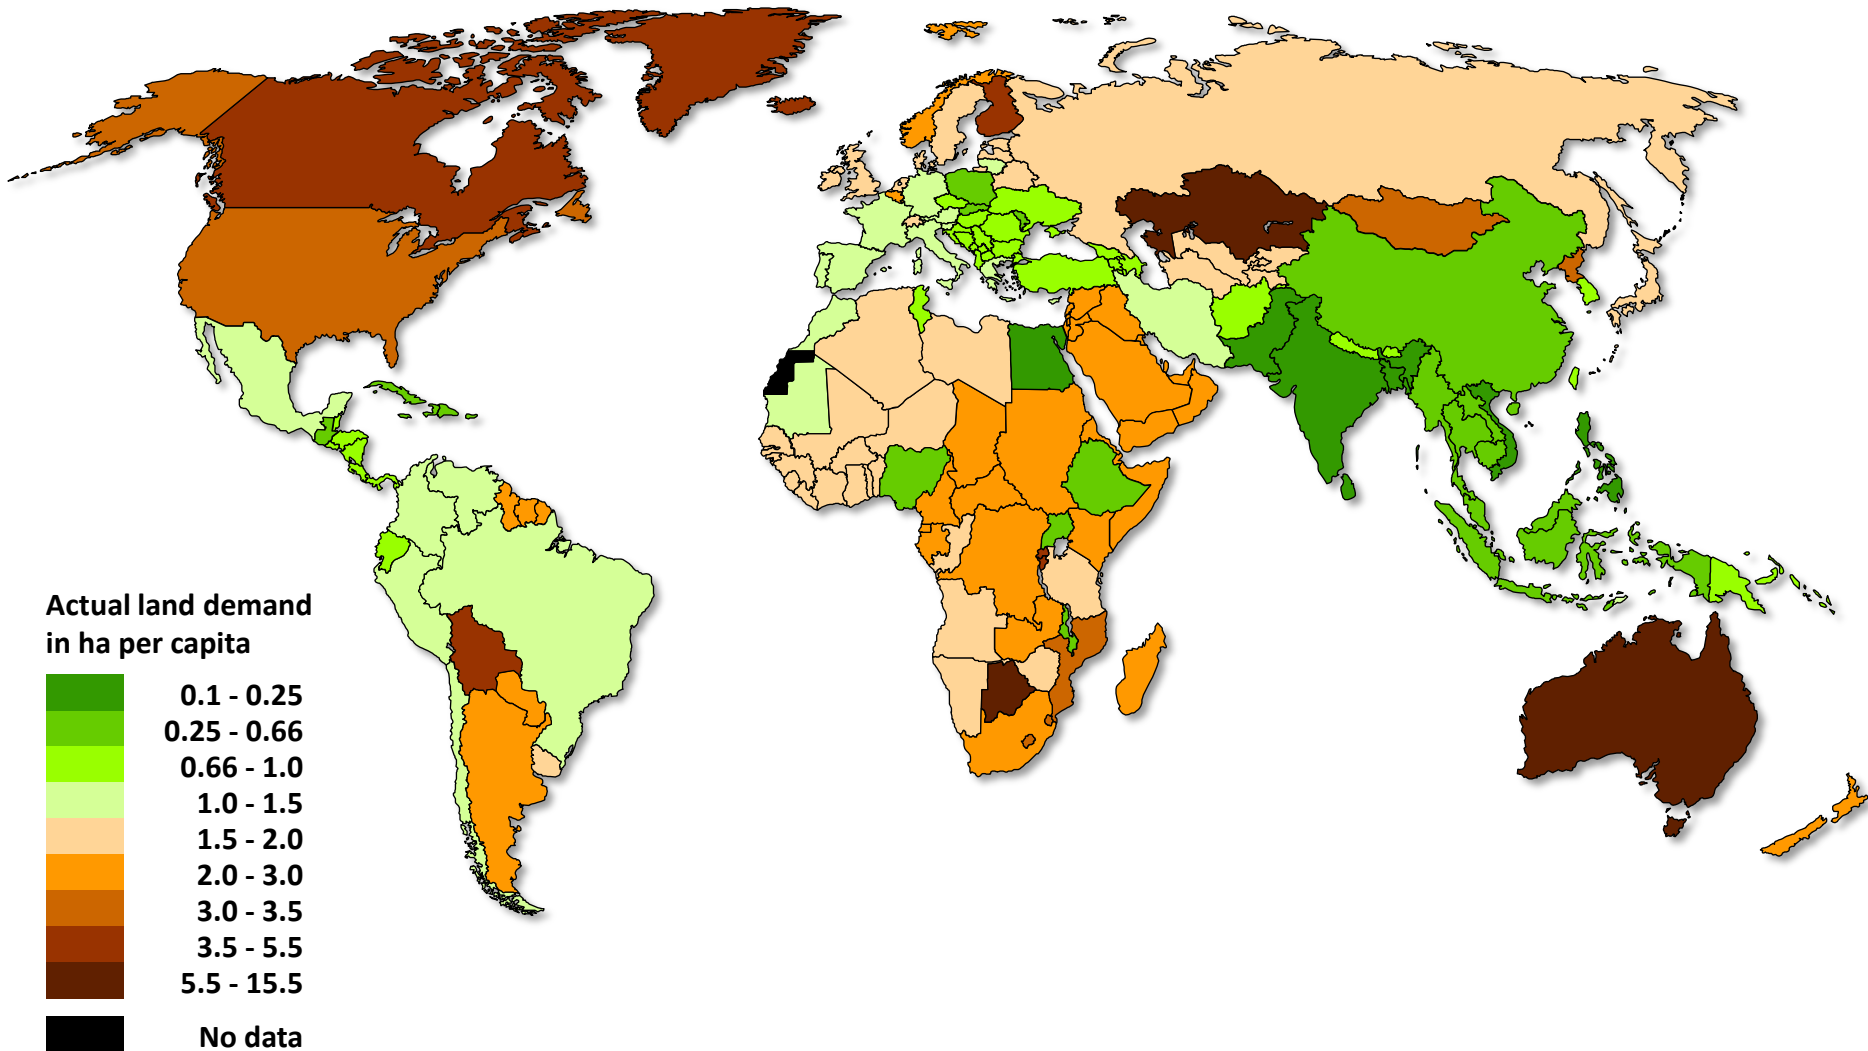

Monetary data (IO tables, bilateral trade)

- GTAP v7 – Global Trade Analysis Project
- Data coverage:
 - 113 countries and world regions
 - 57 economic sectors
 - Year 2004 (& 1997)

Land use data

- FAOSTAT
- Agricultural, grazing and forestry land use, split up in 10 categories
- Data quality!

Land Footprint in ha per capita, 2004

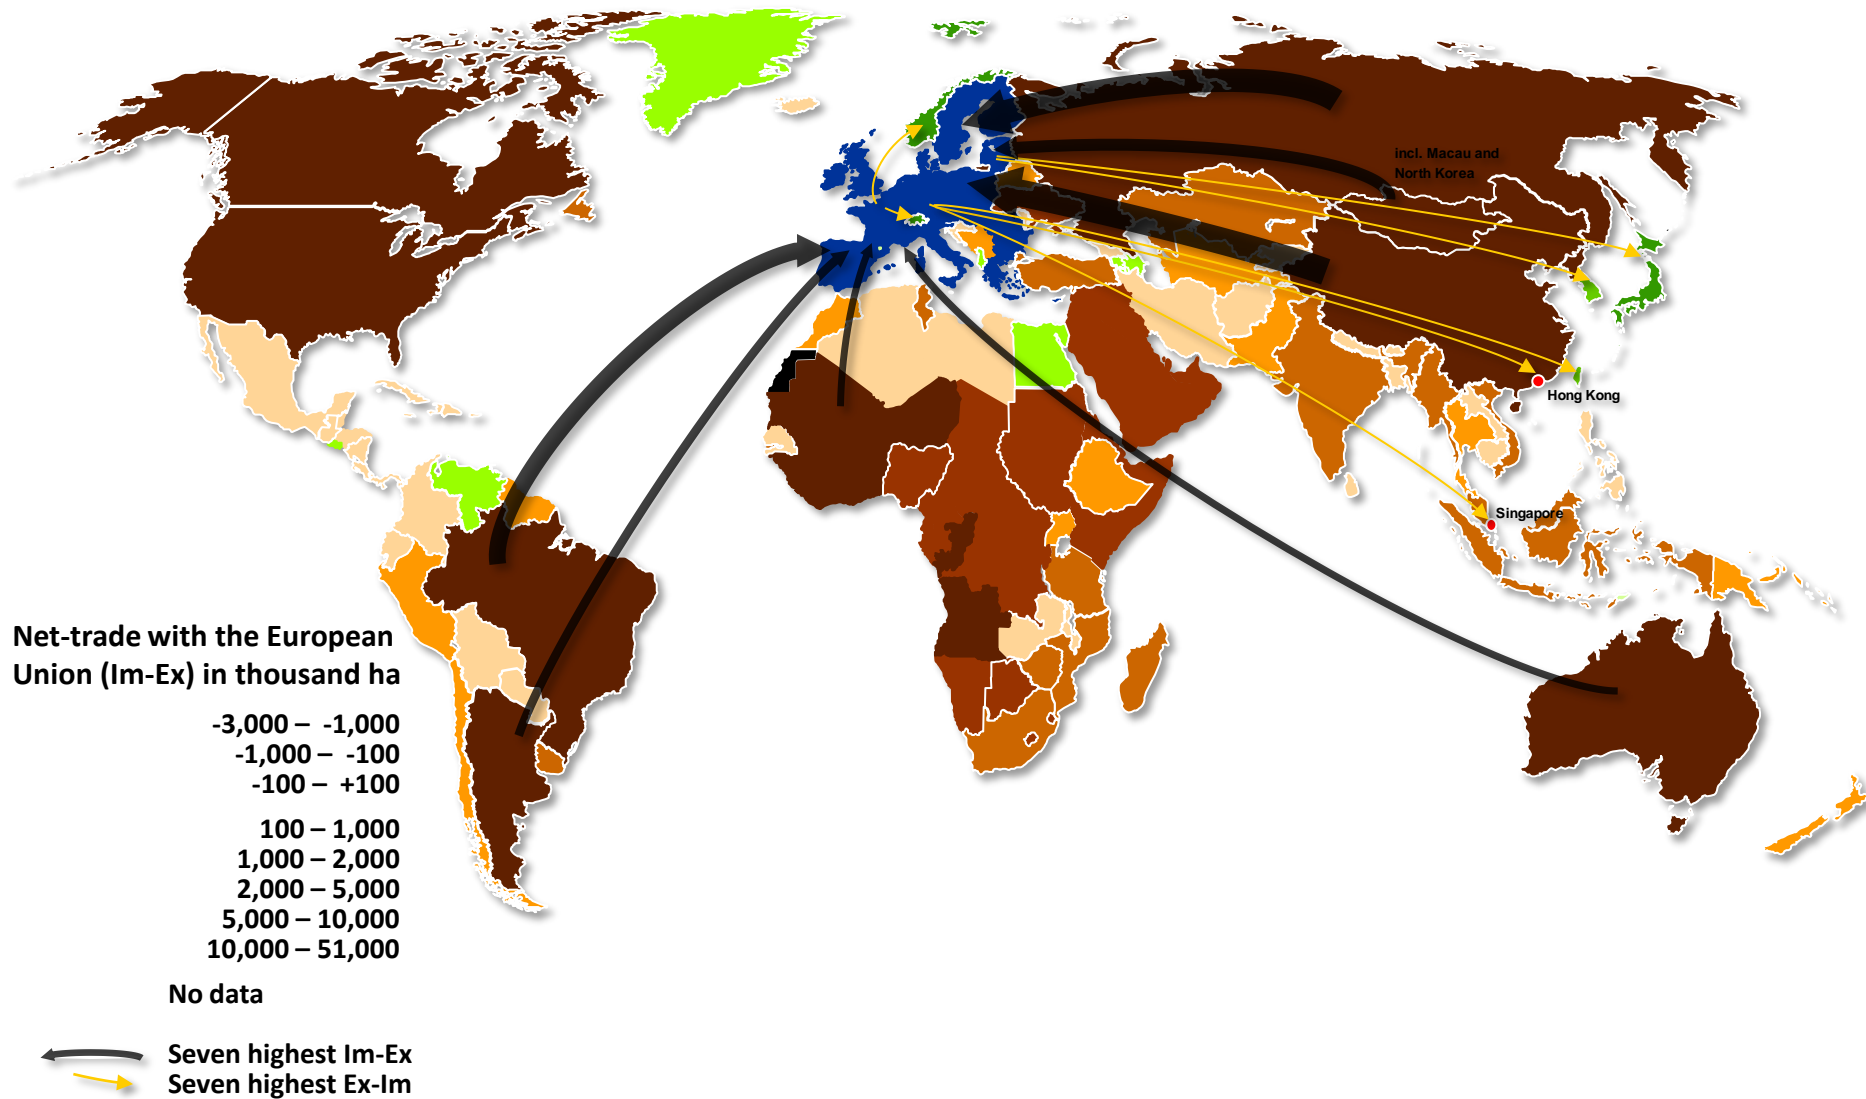

Land Footprint per capita 2004

Trade balance, out of Top 5, 2004

Trade balance EU-27 and rest of the world

Land Footprint - UK

UK: impact map per capita, in 10 m²

	Oceania	Asia	North America	Latin America	Europe	Africa	Total
Crop products	15	60	19	44	121	80	340
Animal products	35	53	9	49	146	107	399
Wood products	1	21	7	2	26	5	61
Clothing	5	120	5	7	6	9	153
Manufactured products	7	117	24	10	48	22	229
Construction	2	41	11	5	42	16	117
Service	17	107	24	23	82	45	299
Total	82	520	99	140	471	285	1597

2004

Conclusions

- **Comprehensive methodology:**
 - Actual land area (no weighing with productivity):
 - EU-27 imports almost 350 million hectares
 - Geographically explicit
 - Highest imports from China, Russia, Brazil
 - Sectoral perspective
 - UK example: agricultural & animal products, but also services
- **Data quality** issues
- **Interpretation in relation with other resource categories** – e.g. biomass/water consumption

Thank you for your attention!
